

Celo DR

Disaster recovery and business continuity are vital aspects of today's IT infrastructure. It is precisely at times of crisis when data systems are most vulnerable and the need to access them greatest.

Celo DR enables secure remote access to be built into an effective business continuity plan. Key workers can access networks securely via a unique, randomly-generated, single-use password every time they log in.

Celo DR is built around familiar use of a mobile phone making it ideal for quick deployment in emergency situations. It is cost effective and administration light whilst retaining the high level of security demanded by today's business continuity scenarios.

Benefits

Simple, secure and cost-effective plus:

- ✓ Secure out-of-band password delivery via text message to user's own mobile phone
- ✓ Familiar technology - quick to deploy and simple to use in an emergency
- ✓ Helps maintain business productivity
- ✓ Highly customisable to suit individual requirements
- ✓ Scalable - 1 to 100,000+ users
- ✓ Token-less - no hardware to manage or deploy at additional cost and complication
- ✓ No client-side software required
- ✓ Eliminates risk - no need to rely on portable memory sticks or discs
- ✓ Customisable login alert message
- ✓ Built to ISO27001 security standards
- ✓ Effortless to support, monitor and manage, even during the worst of times

Customer Quotes

UK Ministry of Defence (MOD)

"As an executive authority of the UK Ministry of Defence, the security of the DSA's Internet based system www.edisposals.com is of paramount importance. In addition to the normal security expected for Internet-based systems, it was important that the solution would be both effective and easy to implement, and simple for Users to understand and use. Various systems were considered and Celo delivers exactly that: a simple yet highly effective solution that gives us the confidence that our systems remain safe from unwarranted intrusion"
