

Celo Remote

The growth of remote working is delivering real benefits to employers in terms of a flexible, motivated workforce and a reduction in overheads and environmental impact. However, it can also significantly increase the risk of data loss or unauthorised access, especially if sensitive data is physically removed on portable devices like laptops and memory sticks.

Celo Remote eliminates this risk by enabling secure remote access to central IT networks. Built around familiar use of a mobile phone, it is ideal for a decentralised workforce - cost effective and simple to deploy whilst retaining the high level of security demanded by today's IT threats

Celo Remote is aimed at any organisation wishing to harness the benefits of remote working securely including private companies and professional firms such as medical, legal and accountancy practices.

Benefits

Simple, secure and cost-effective plus:

- ✓ Secure out-of-band password delivery via text message to user's own mobile phone
- ✓ Harness the benefits of remote working - increased productivity, lower costs and reduced carbon footprint
- ✓ Quick and easy to deploy - familiar technology with no other software required
- ✓ Enhances data security and therefore integrity of data systems
- ✓ Multiple password delivery options maintain performance when no mobile signal
- ✓ Ability to customise length and lifetime of password, and deploy password prior to login
- ✓ Eliminates risk - no need to remove data on discs, laptops or memory sticks
- ✓ Built to ISO27001 security standards
- ✓ Scalable - 1 to 100,000+ users
- ✓ Effortless to support, monitor and manage

Customer Quotes

UK Ministry of Defence (MOD)

"As an executive authority of the UK Ministry of Defence, the security of the DSA's Internet based system www.edisposals.com is of paramount importance. In addition to the normal security expected for Internet-based systems, it was important that the solution would be both effective and easy to implement, and simple for Users to understand and use. Various systems were considered and Celo delivers exactly that: a simple yet highly effective solution that gives us the confidence that our systems remain safe from unwarranted intrusion"
